

Ekona's  
Tri-Generation Pyrolysis (TGP)  
Solution for Blue Hydrogen  
Production

December 2019

## Developing a novel pyrolysis platform for H<sub>2</sub> production

- **Clean** - 90% fewer GHG emissions than incumbent SMRs
- **Low-cost** - Cost parity or better with incumbent SMRs
- **Scalable** - Suitable for large-scale, centralized industrial applications

*We gratefully acknowledge the financial support of the Province of British Columbia's Innovative Clean Energy (ICE) Fund, the NRC Industrial Research Assistance Program (IRAP) and the Canadian Gas Association (NGIF).*

## Industrial H2

### Global H2 Markets

Petroleum Recovery & Refining  
 Ammonia Production  
 Methanol Production  
 Metal Production and Fabrication  
 Electronics  
 Food Industry  
 Other

Electrolysis – 4%

### GHG Emissions

- 673 Mt-CO<sub>2</sub>e/year  
 ~ 1.3% of global GHG's

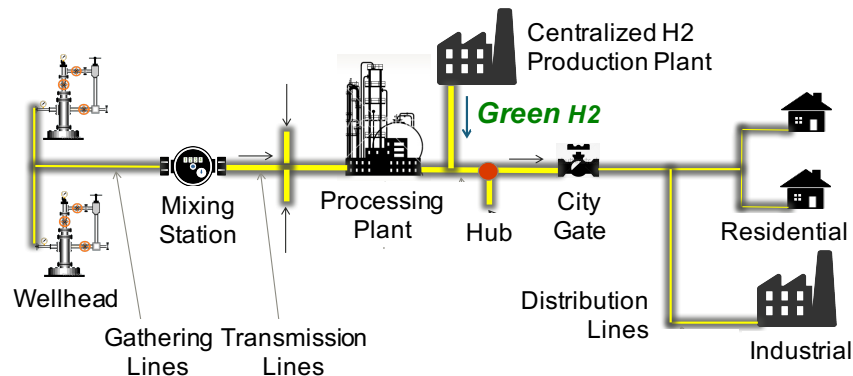

### H2 Production Cost

- SMR: \$1.20/kg-H<sub>2</sub>
- SMR + CCS: \$2.00/kg-H<sub>2</sub>

### Market Size

- Canada: 4 Mt-H<sub>2</sub>/year
- NA: 15 Mt-H<sub>2</sub>/year
- Global: 65 Mt-H<sub>2</sub>/year

## NG Decarbonization

10% H<sub>2</sub> (vol.) is currently feasible with existing NG pipelines and appliances

Downstream GHG Emission Reduction:

3.6%

### GHG Emissions (downstream)

- 6,600 Mt-CO<sub>2</sub>e/year  
 ~ 13% of global GHGs

### Target Energy Supply Cost

- NG + \$50/t CO<sub>2</sub> levy = \$7/GJ  
 ~ \$0.85/kg-H<sub>2</sub>

### Market Size (10% H<sub>2</sub> vol.)

- Canada: 1.3 Mt-H<sub>2</sub>/year
- NA: 7.6 Mt-H<sub>2</sub>/year
- Global: 36 Mt-H<sub>2</sub>/year

## Projected Clean H<sub>2</sub> Production Cost (\$/kg-H<sub>2</sub>)

### Breakthrough Requirements

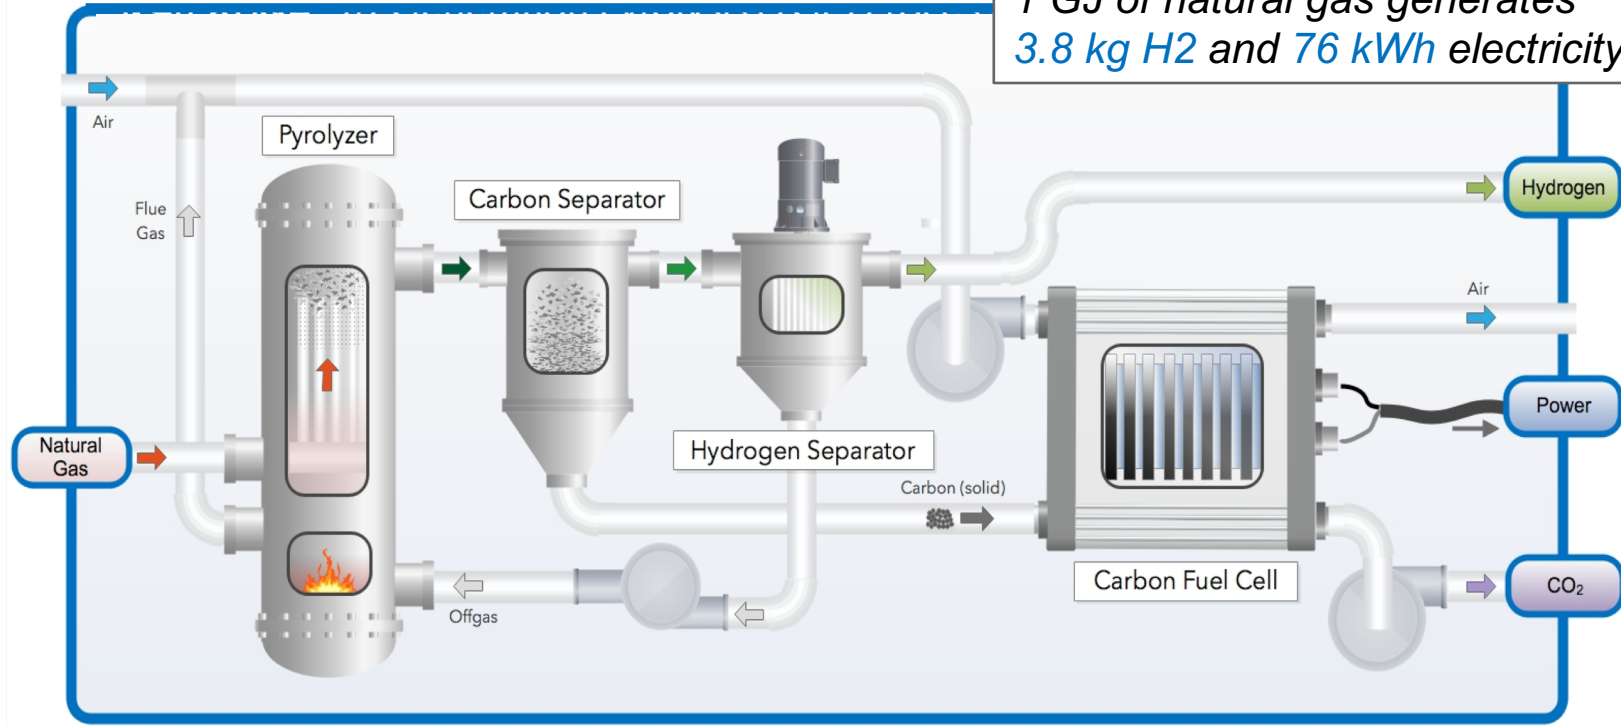

- Industrial H<sub>2</sub> Production: *Continuous, large-scale*
- Cost Target: **\$0.85/kg**
- GHG Emissions Reduction Target: **90%**

### Breakthrough Drivers

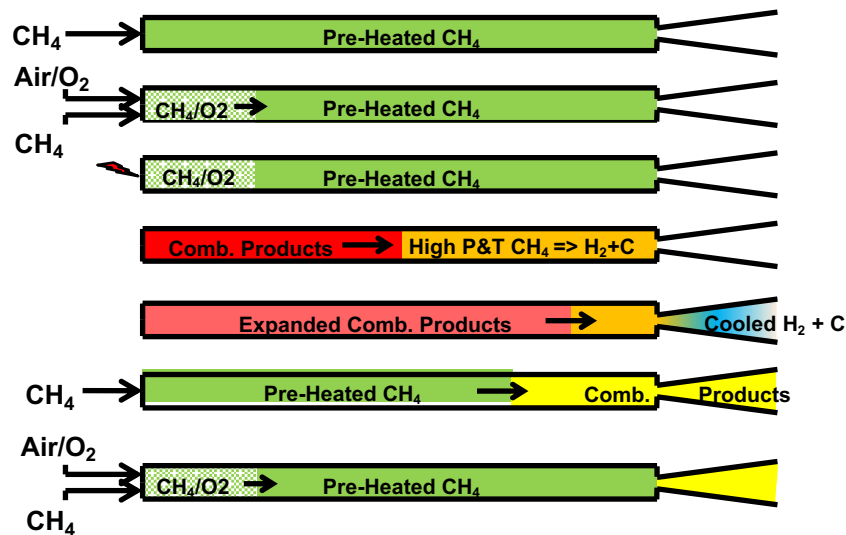

- Abundant, inexpensive and continuous source feedstock
- Minimize CO<sub>2</sub> Separation Costs
- Maximize Carbon Value

# Tri-generation Pyrolysis (TGP)

*1 GJ of natural gas generates  
3.8 kg H<sub>2</sub> and 76 kWh electricity*

## Pulse Methane Pyrolysis (PMP)

- Pulsed injection of thermal & mechanical energy
- Automatic removal of C-buildup due to unsteady flow
- Fast kinetics quenching via unsteady expansion
- Prototype [reactor](#) presently being assembled & tested
- PI Partners: [Geminus Technologies](#), [U of W](#), [NRC](#)

## Direct Carbon Fuel Cell (DCFC)

- Fuel: solid carbon in a MC mediator
- Advantages: high efficiency + pure CO<sub>2</sub> byproduct
- Challenges: carbon delivery to anode
- Prototype [button cell](#) is presently being assembled & tested
- PI Partners: [NRCan-Canmet Energy](#), [NRC](#)

## PMP Reactor

Capacity: **100 TPD-H<sub>2</sub>, 366 TPD-carbon**

- Scalable for industrial applications
- Low cost reactor design
- Low maintenance / no carbon fouling
- Industry-standard balance of plant
- PMP H<sub>2</sub> Production Cost: **~\$10/GJ**

## Manifolds

Molten Carbonate Bath

## DCFC Module

Capacity: **4 MWe (gross)**

- Containerized modules for site installation
- Industrial stack design for low-cost, industrial scale
- Low maintenance / electrolyte bath
- Pure CO<sub>2</sub> byproduct (CCS / CCU)
- TGP H<sub>2</sub> Production Cost: **~\$5/GJ**

# H2 Production Cost

## Pulse Methane Pyrolysis (PMP) *pyrolysis only w/o carbon sales*

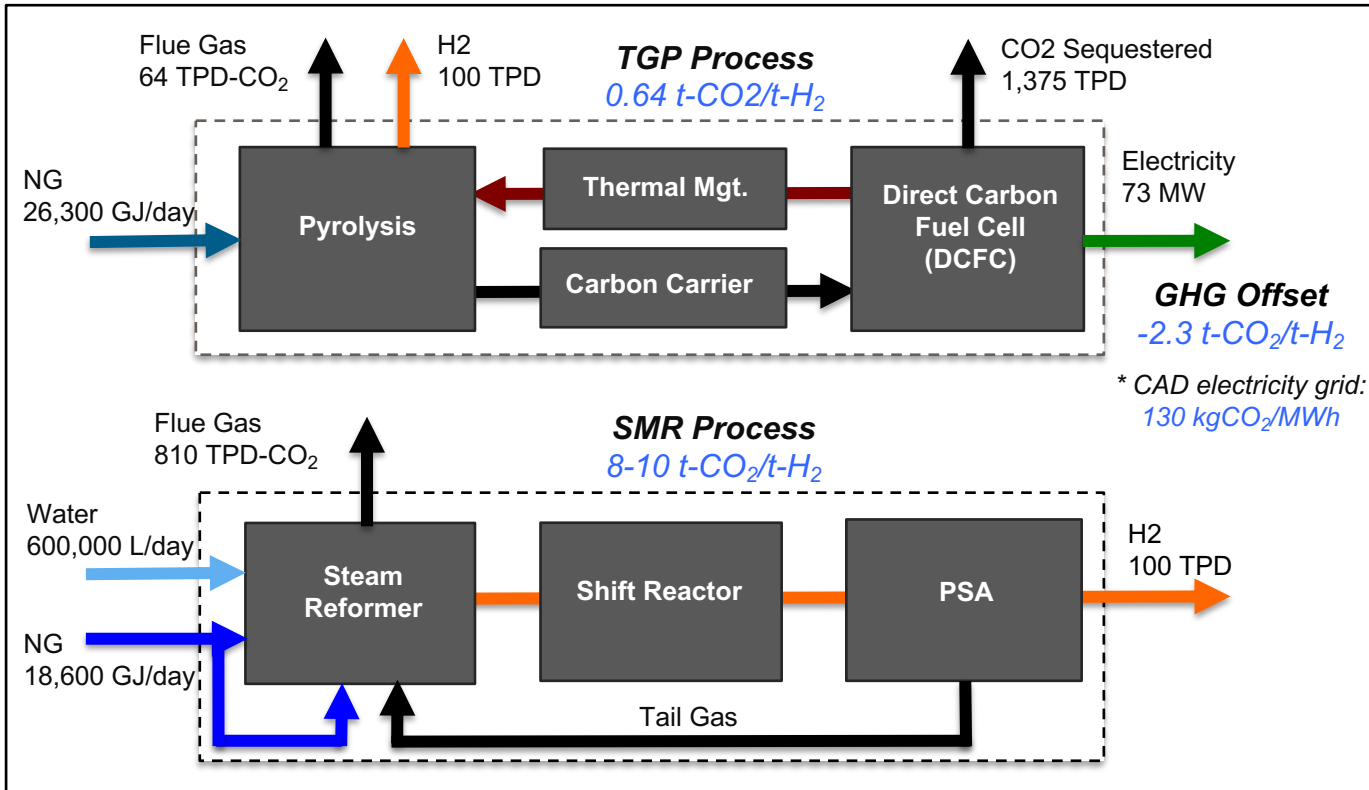

- SMR - CO2 Levy \$0/t
- SMR - CO2 Levy \$50/t
- SMR - CO2 Levy \$100/t
- Pilot: 8 TPD Pulse Pyrolysis Plant vs. Carbon Price
- Commercial: 100 TPD Pulse Pyrolysis Plant vs. Carbon Price

## Tri-generation Pyrolysis (TGP) *includes DCFC for power generation*

- SMR - CO2 Levy \$0/t
- SMR - CO2 Levy \$50/t
- SMR - CO2 Levy \$100/t
- Pilot: 8 TPD TGP Plant vs. Electricity Price
- Commercial: 100 TPD TGP Plant vs. Electricity Price

## TGP versus SMR

- 90% GHG reduction
- 100% H<sub>2</sub>O reduction

## GHG Emissions Offset

- ~10 kg-CO<sub>2</sub>/kg-H<sub>2</sub>

## GHG emissions reductions applied across all markets:

- Canada: 50 Mt-CO<sub>2</sub>/year  
 ~ 7% of Canada's GHGs
- Global: 1 Gt-CO<sub>2</sub>/year  
 ~ 2% of global GHGs

# Roadmap

	2017	2018	2019	2020	2021	2022	2023	2024
Stage 1 – Market and Technical Requirements	  <b>Customer Requirements Document (CRD)</b>							
Stage 2 – Technology Formulation & Core Technology Testing (TRL3)		  <b>Preliminary Design and Techno-economic Analysis Validated</b>						
Stage 3 – Proof-of-Concept Development & Testing (TRL4)			  <b>Lab-scale PMP Reactor &amp; DCFC Verified</b>					
Stage 4 – Pilot-scale Prototype Development & Testing (TRL5)				  <b>Pilot-scale PMP Reactors Verified</b>				
Stage 5 – Brass-board System Development & Testing (TRL6)				  <b>BOP Integration Testing</b>				
Stage 6 – PMP Customer Field Trials & Evaluation (TRL7-9)						  <b>200 kg/day</b>		
Stage 7 – PMP Commercial Rollout Stage 8 – DCFC Introduction								

# PMP Field Trial Program

Field Testing of pyrolyzer system with lead customers is under development

Lab-scale PMP Reactor Testing  
2019-2020

Pilot-scale PMP Reactor Testing  
2020-2021

PMP Field Trial Skid (~200 kg-H<sub>2</sub>/day)  
2022-2023
